Protocol for Calamansi Production using The Masinag Organic Fertilizer

Land Area: 1 hectare

1. Water the trees with diluted Masinag 1:100 around 5 liters per tree.
2. After one week, spray the whole tree with 1:100 dilution of Masinag.
3. Repeat spraying process every two months until flowering.
4. Stop spraying when the flowers bloom.
5. Spray again the solution of 1:100 Masinag once the fruit mango size appears.
6. Spray again once the fruit sizes is as big as the corn grains.
7. Spray again once the fruit is as big as marbles.
8. Harvest when ripe.

Note: It is best to dig a hole near the tree and put around 20 kilos of compost or chicken manure to replenish the nutrient of plants. Water the compost or chicken manure with Masinag solutions once placed.
